

HTTP Error 503.2 - Service Unavailable

The serverRuntime@appConcurrentRequestLimit setting is being exceeded.

Most likely causes:

- Setting is too low.
- The application is taking too long for the current load.

Things you can try:

- Try increasing the value of the setting.
- Check that external resources (for example, disk, database, etc..) are performing at expected levels.
- Check that the application has not deadlocked.

Detailed Error Information:

Module	IIS Web Core	Requested URL	http://www.madisonadams.com:80/adminnew/town-report-print.aspx?id=62
Notification	BeginRequest	Physical Path	C:\HTTP\madisonadams.com\adminnew\town-report-print.aspx
Handler	PageHandlerFactory-Integrated-4.0	Logon Method	Not yet determined
Error Code	0x00000000	Logon User	Not yet determined

More Information:

IIS will not allow more concurrent requests to an application than the serverRuntime@appConcurrentRequestLimit setting permits.
