

## HTTP Error 503.2 - Service Unavailable

The serverRuntime@appConcurrentRequestLimit setting is being exceeded.

### Most likely causes:

- Setting is too low.
- The application is taking too long for the current load.

### Things you can try:

- Try increasing the value of the setting.
- Check that external resources (for example, disk, database, etc..) are performing at expected levels.
- Check that the application has not deadlocked.

### Detailed Error Information:

<b>Module</b>	IIS Web Core	<b>Requested URL</b>	http://www.madisonadams.com:80/adminnew/town-report-print.aspx?id=74
<b>Notification</b>	BeginRequest	<b>Physical Path</b>	C:\HTTP\madisonadams.com\adminnew\town-report-print.aspx
<b>Handler</b>	PageHandlerFactory-Integrated-4.0	<b>Logon Method</b>	Not yet determined
<b>Error Code</b>	0x00000000	<b>Logon User</b>	Not yet determined

### More Information:

IIS will not allow more concurrent requests to an application than the serverRuntime@appConcurrentRequestLimit setting permits.
